

Pushing to Github

These are the steps to make changes to the remote repository after you make the changes to the project. You have created the repository in the previous segment. The same step needs to be followed for Windows/ Linux and macOS.

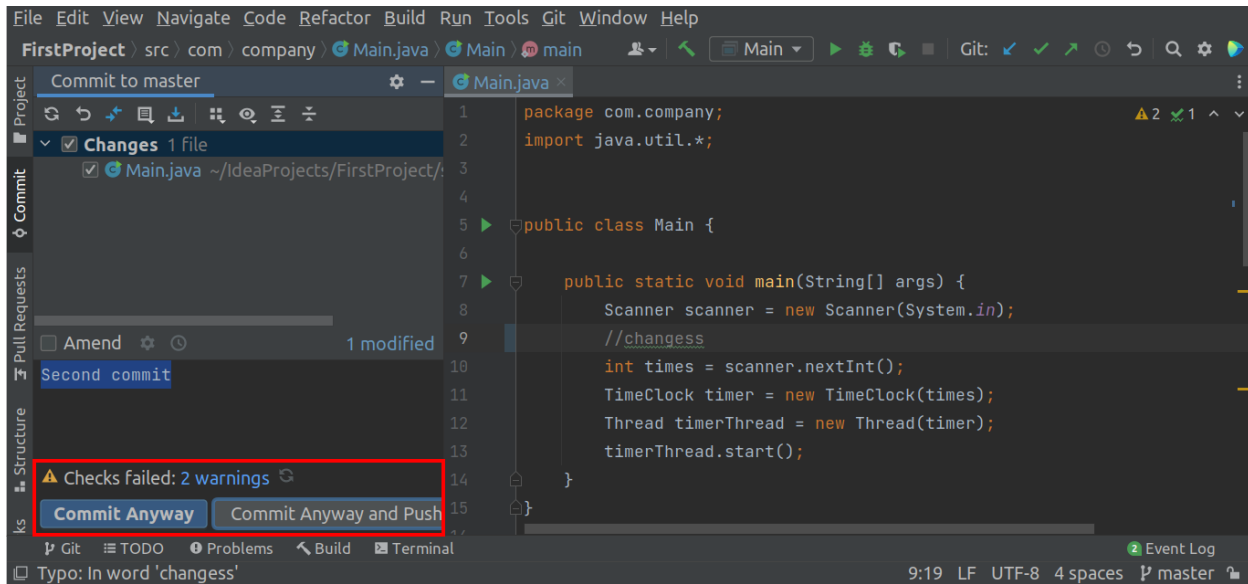

1. Go to Git > commit.

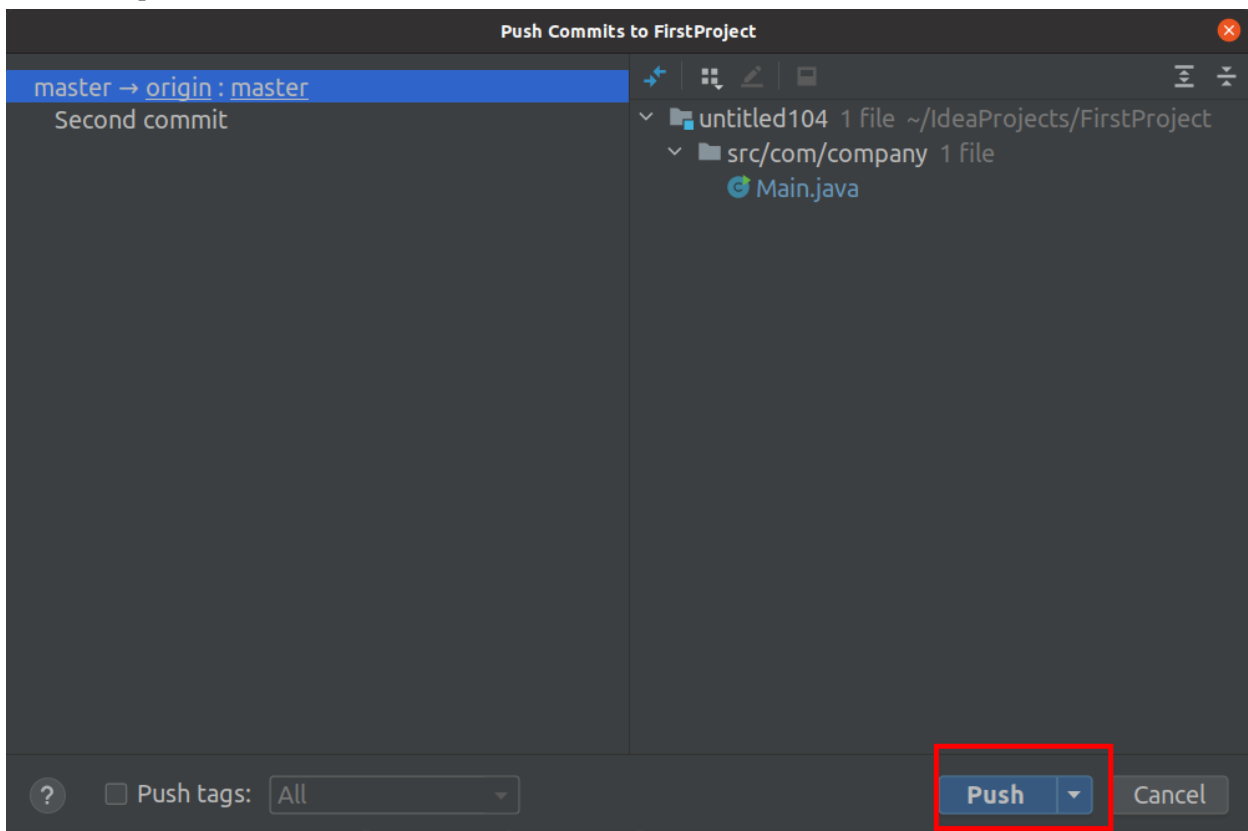

2. Write a commit message and then Commit and Push. This will reflect the change in the remote repository. You will see the change in the Commit to Master Tab.

3. (Optional) Next, you may get some warnings, click Commit Anyway and Push.

4. Click on push.

5. You have successfully made the changes.
