

Installing IDE for Windows

These steps should be followed only if you have attended the previous segment and added the JDK environment variable as path.

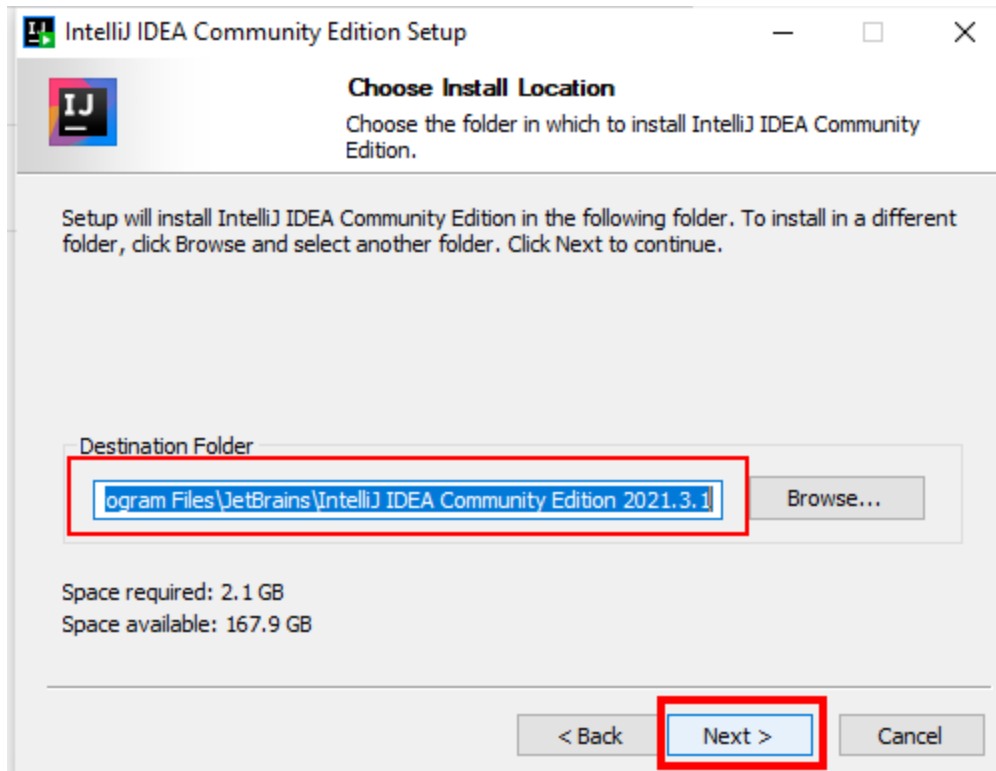

1. Go to the location where the IntelliJ is downloaded. Double click and run the file.

Name	Date modified	Type	Size
Today (3)			
 idealC-2021.3.1	06-01-2022 20:49	Application	5,75,024 KB

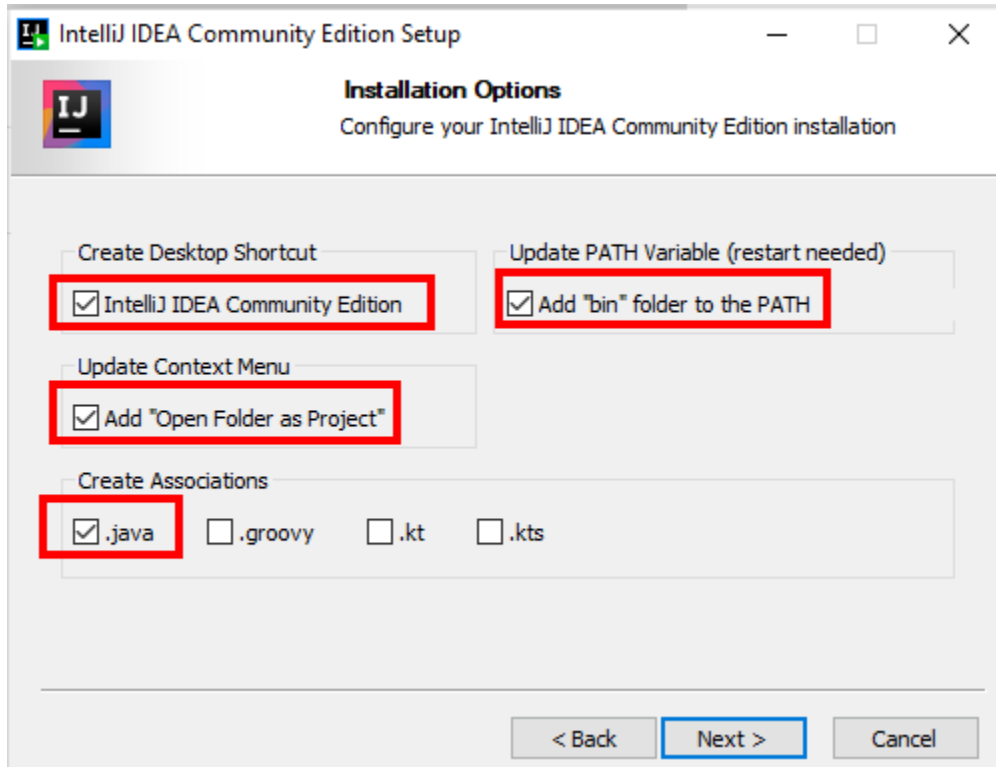

2. Once the installation starts, click on next.

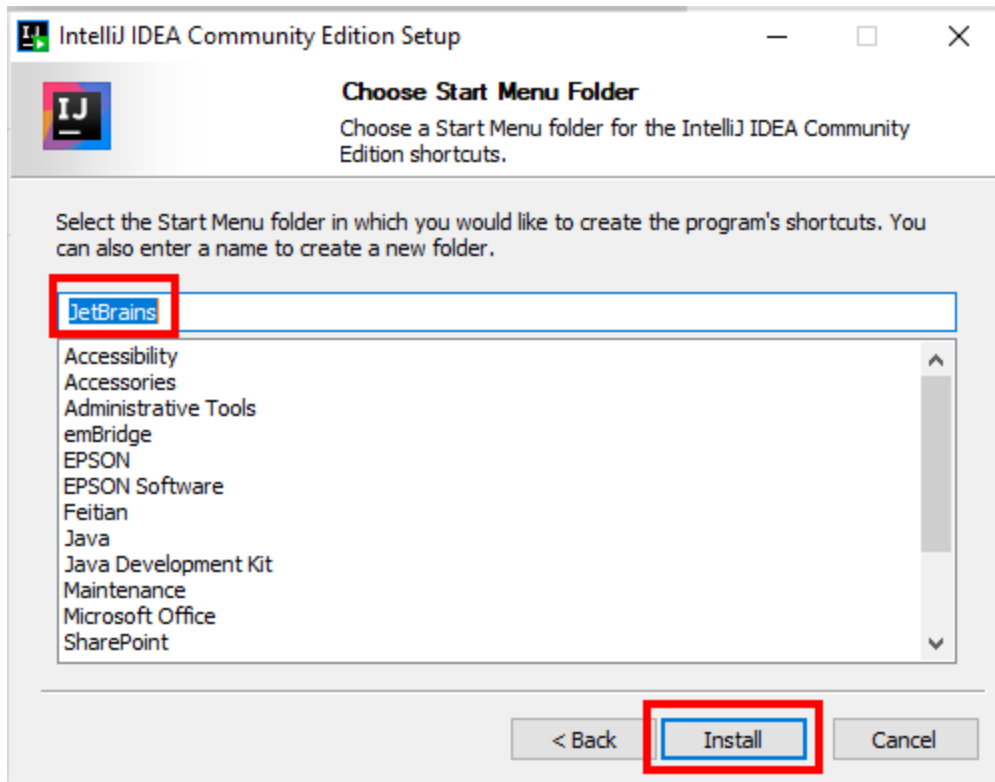

3. Next select the location (leave it default) and then click next.

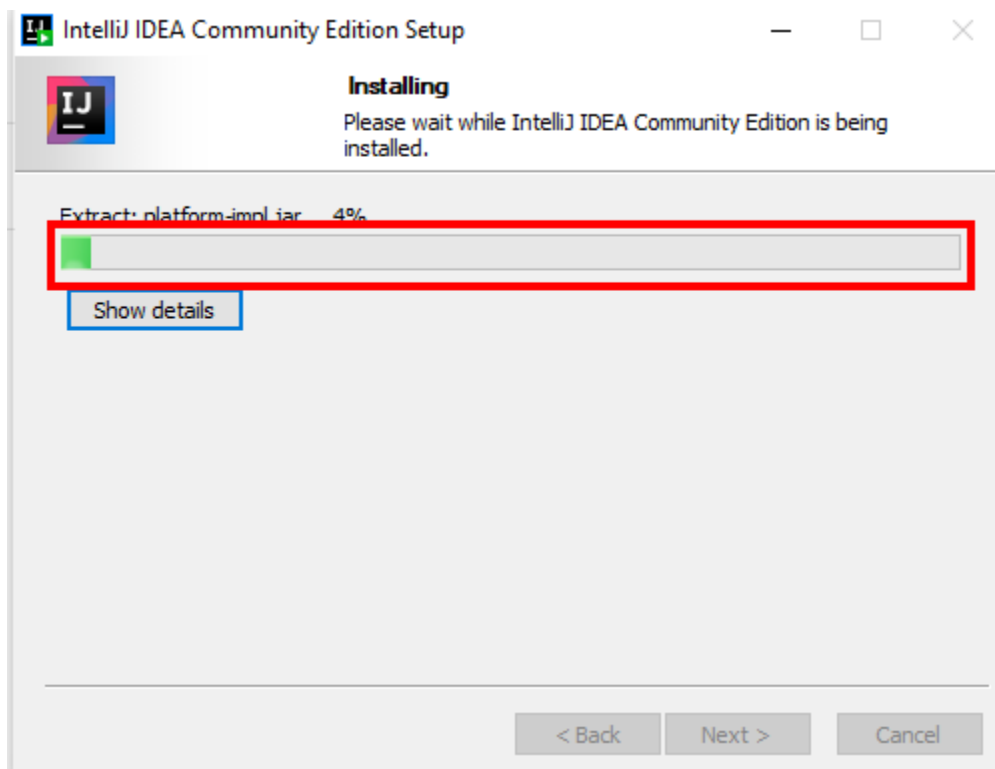

4. Choose the installation options as shown in the figure below.

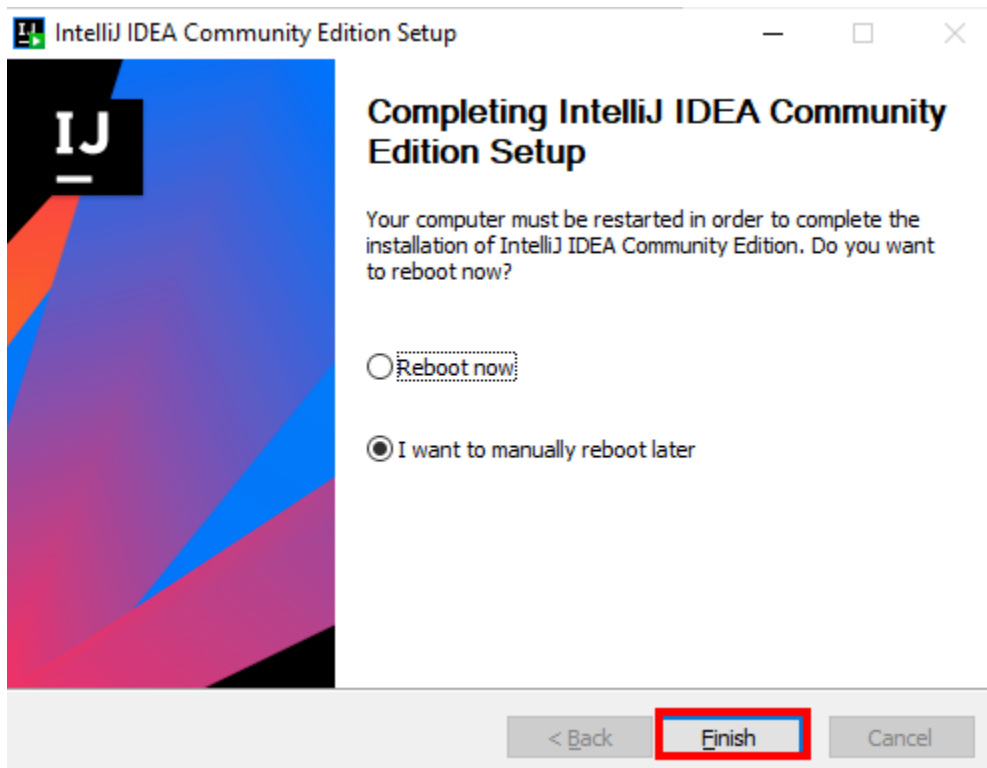

5. Click on install.

6. The installation will start.

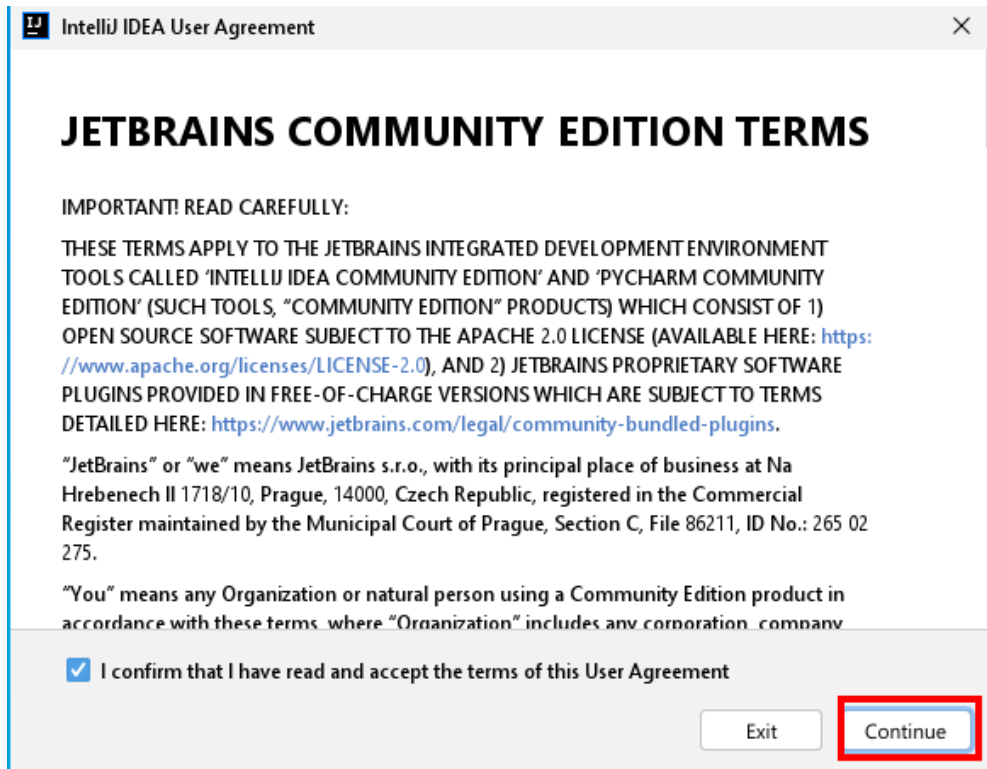

7. Wait for the installation to complete and then click finish.

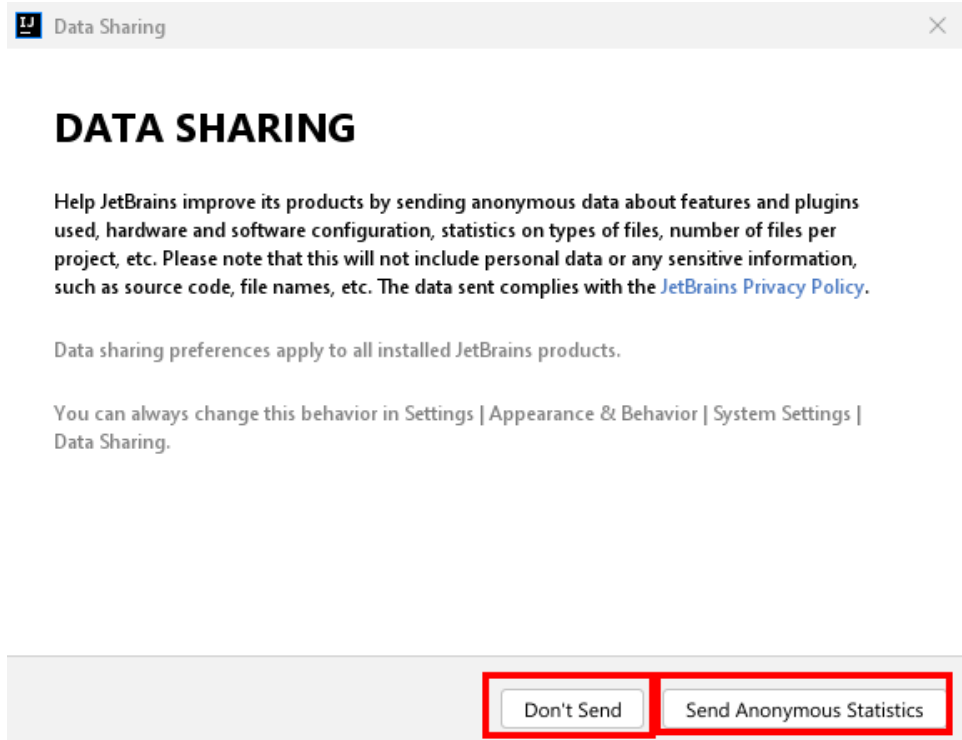

8. An IntelliJ icon will appear at the desktop, opening the application.

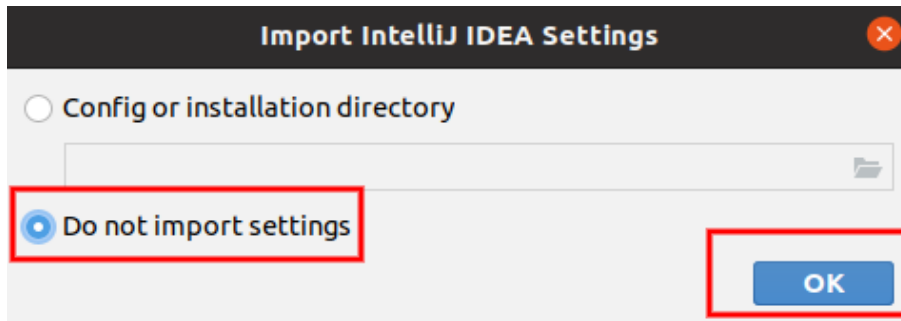

9. Check the box and then continue.

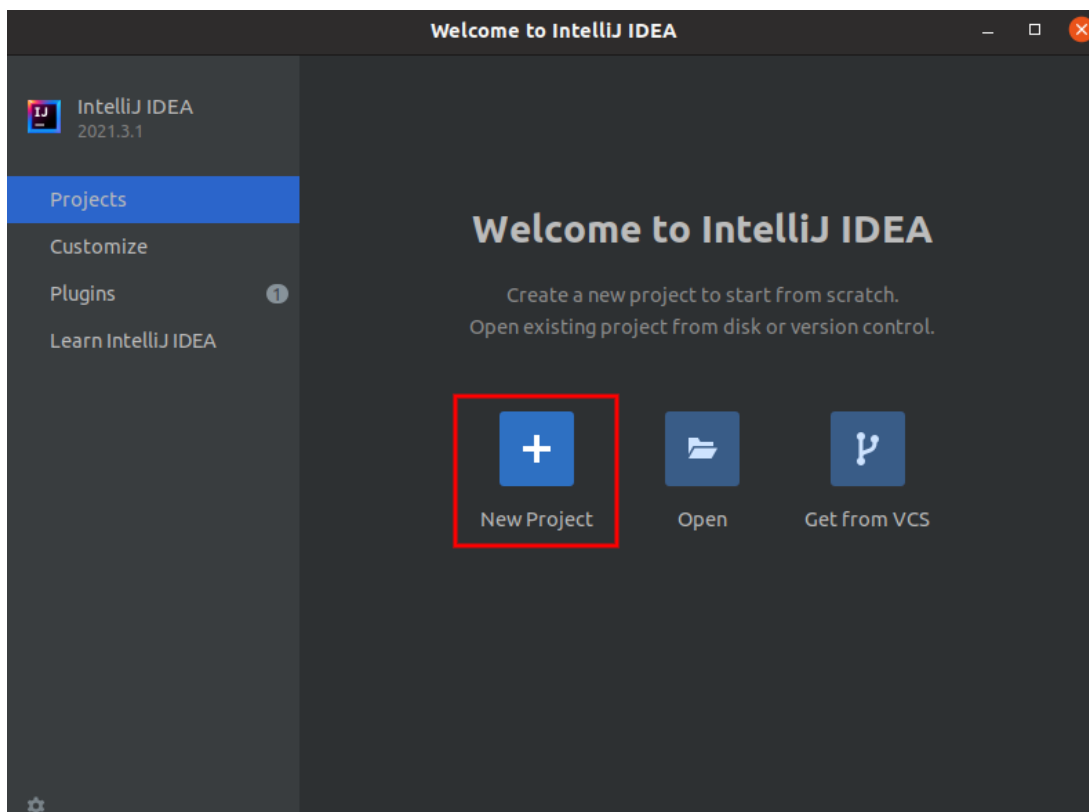

10. Click the data sharing policy as per your convenience.

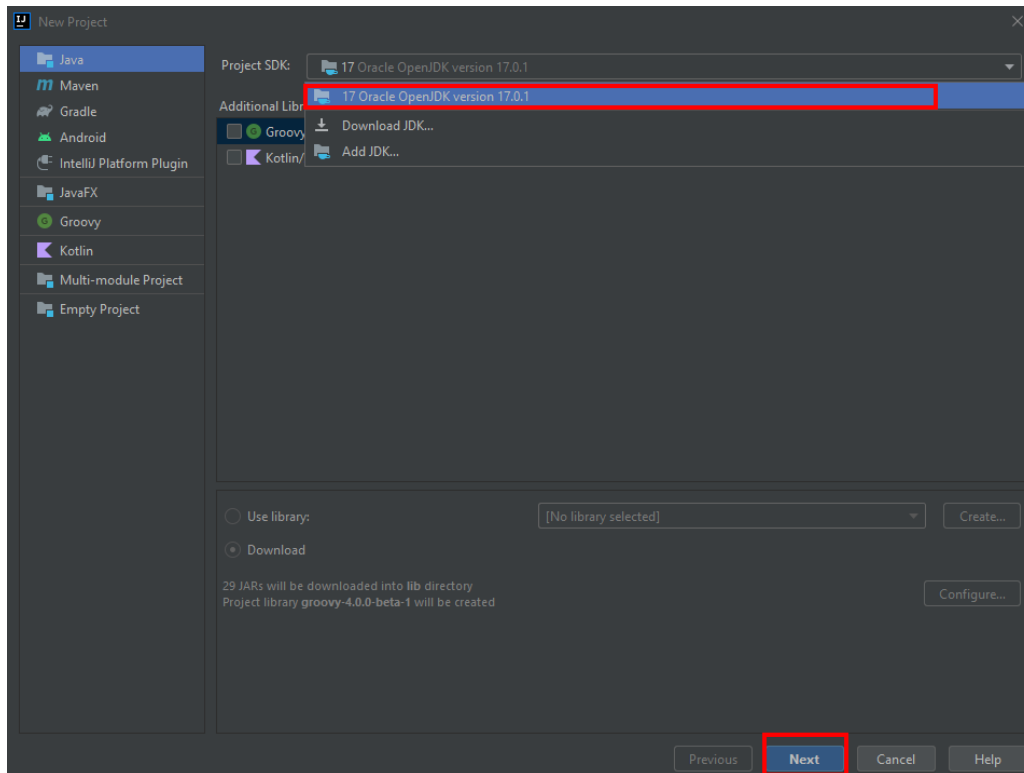

11. Choose do not import settings and click ok (optional as this may not appear).

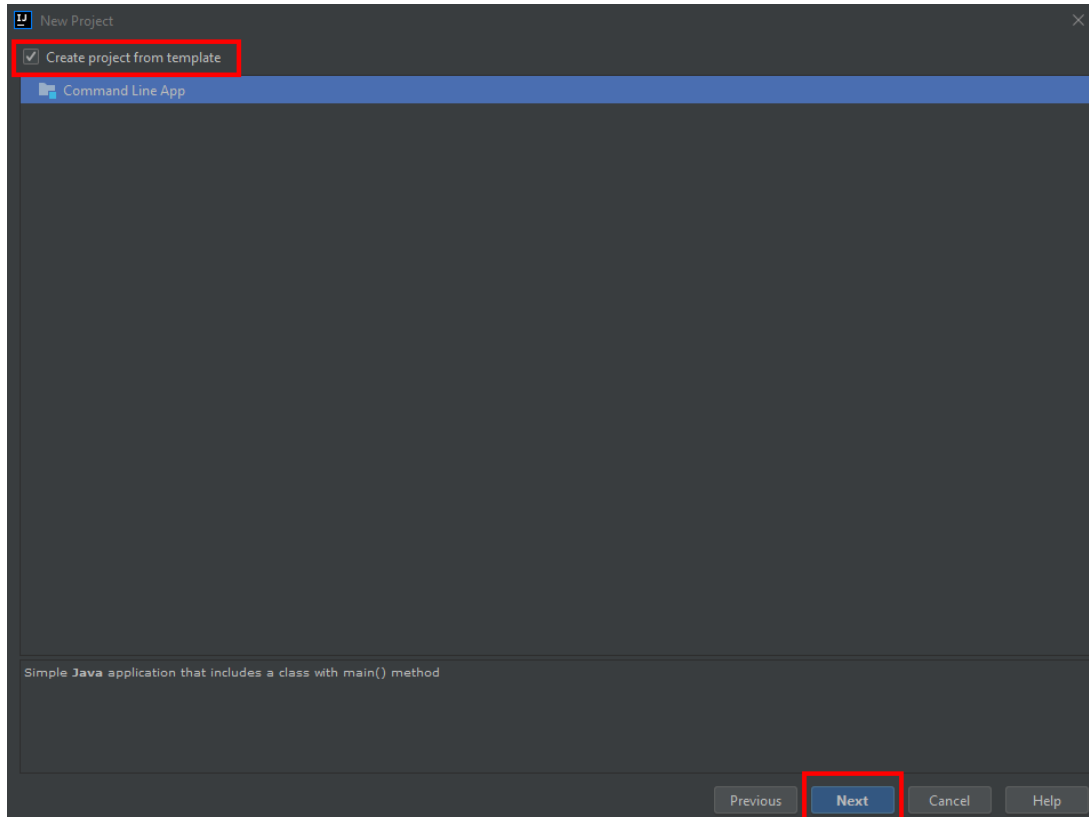

12. Further, you will see a screen below. Click on the new Project.

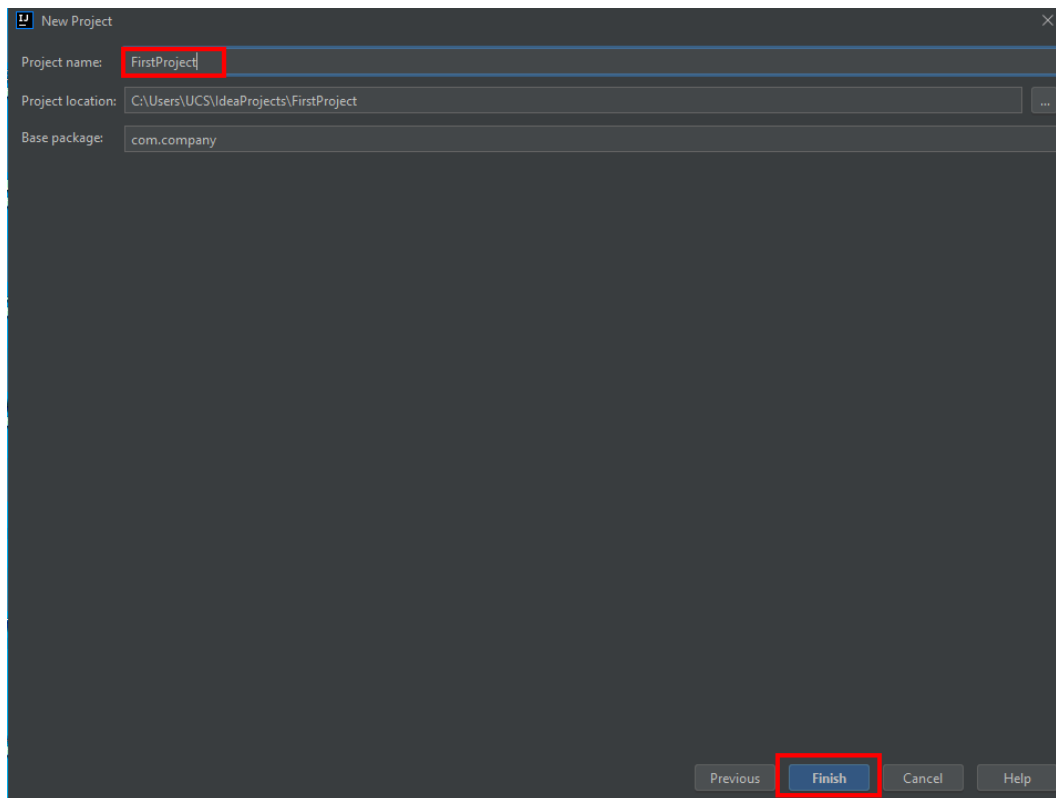

13. Next the JDK will be automatically selected as you have downloaded and configured the path in previous segments and click on next.

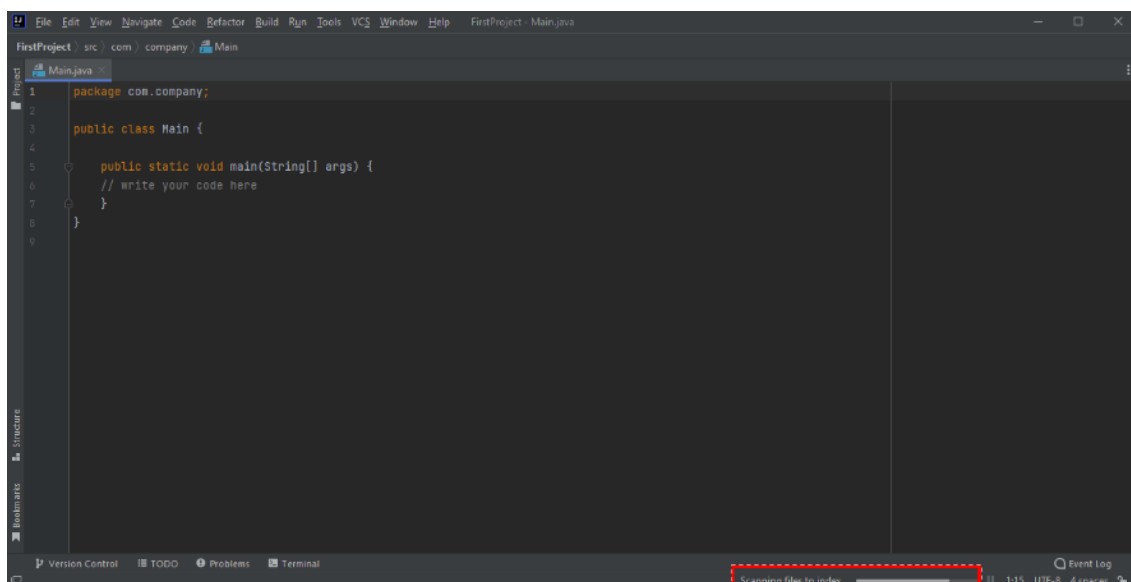

14. Choose the **create project template** checkbox and then click next.

15. Name your project here and click finish.

16. You will see a screen something like this where on the bottom right, some downloads are still continuing. Wait for the processes to finish in the event log.

17. **Congratulations !!** You have now successfully installed and configured the IDE.
